

Earthing Rods

These rods are formulated in two different manner- Externally threaded and internally threaded.

At Vipul Copper we specialize in manufacturing externally threaded and internally threaded Copper Earth rod as per the market demand. Our Copper Earth rods are made from highly pure solid Copper composite to provide resolution to corrosion incident requirement.

The solid Copper Earth rods are made from highly pure oxygen free copper composites and can withstand almost any corrosion factor. Our ISO certified copper earth rods are in high demand across industrial, commercial and private segment.

Application of Solid Copper Earth Rods

- Earthing
- Submerge salt water stands
- Acid dippers and more.

Earthing Rod

We offer superior quality and high performance range of bare copper wires. We have fine wire drawing setup for bulk production. Our bare copper wires are characterized by excellent electrical, thermal and mechanical properties and superior surface finish. These bare copper wires are available in various diameters and different dimensions.
